GK8
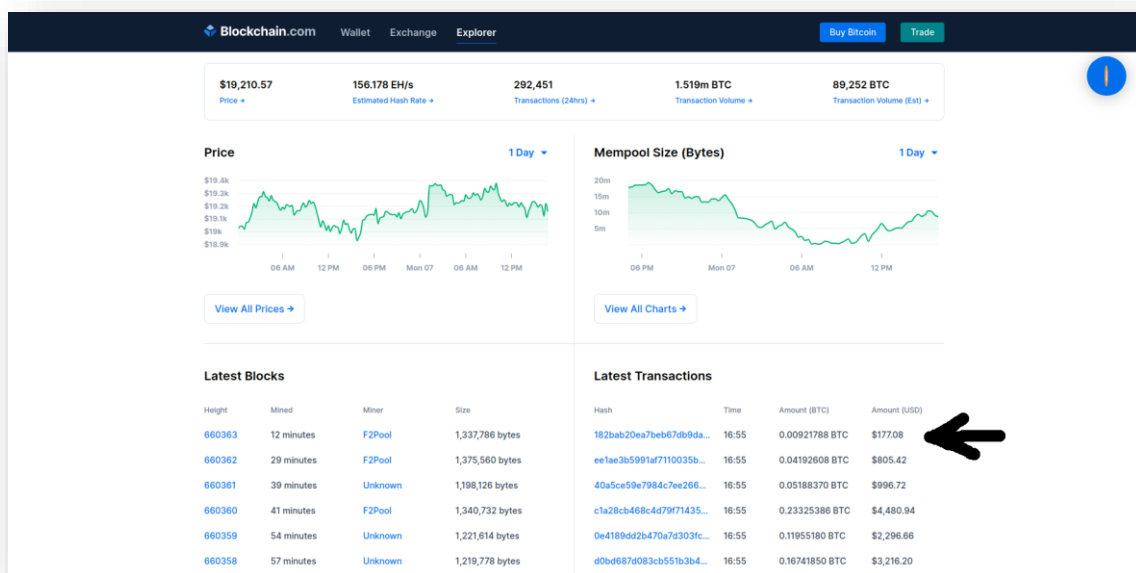

Python Automation – Home Assignment

One of the popular websites for tracking crypto transaction is
https://www.blockchain.com/explorer?utm_campaign=dcomnav_explorer

Your task is to create an automated python script using Selenium, that will crawl over a chain of transactions, starting form the most recent transaction and going back to its coinbase, finding the shortest path to the coinbase.

Here are some screenshots to clarify the process:

Start from the most recent transaction:

Crawl backwards in all paths (3, in this example):

Reaching the Coinbase in all paths:

Good Luck!
